BUYERS: Give this Check List the "Once Over" When Ordering

This is a list of items most commonly used and needed by Greenhouse operators during the catalog months of the year. A glance at the list will probably recall any needs you might have forgotten which would inconvenience you later. It will also be a suggestion aid as to the possibilities of filling any empty benches. Included are a few hints regarding varieties, time of blooming, and culture. All items are listed in our "Books for Florists," but this will give you a quick check for busy months. We are planning to print improvements on this in each book if it is of any value to you. We would appreciate hearing your ideas. Better keep this for references until the next issue.

*Starred perennial varieties are valuable for cutting besides plant sales.

Asters

WILT-RESISTANT

Protect Asters with Insecticides Containing D.D.T.

To kill leaf hoppers, which transmit the yellow disease, for which there has hitherto been no reliable treatment. Occasional spraying or dusting with this lasting insecticide should protect your asters from infection, which is the chief enemy of these beautiful flowers in sections where the wilt disease is not established in the soil. We recommend Protexall D. D. T. 5% dust, and D. D. T. 50% wettable dust. Wilt resistant varieties are resistant only to wilt, but in general are more vigorous, and less susceptible to other infections. Whenever a variety can be offered in a wilt resistant strain, we omit its non-resistant counterpart from the list.

As the roots of Asters are produced near the surface, a mulch of some kind spread over them in hot weather is very beneficial and will be repaid by fine plants, large blooms, stronger stems, and more profuse blooming.

CREGO—2 feet

This flower is giant in size, many blossoms six inches across. The petals are nearly double the length of the older varieties and are twisted and curled into a very fluffy effect. Comes into bloom in August, continuing well into September. A splendid keeper and shipper.

PANSY VAUGHAN'S SUPER SWISS GIANT MIXTURE

PANSIES

Pansies have long been a favorite with us. We introduced the Swiss Giants to American gardens and named and introduced the lovely Canadian variety, Maple Leaf, several years ago.

VAUGHAN'S SUPER SWISS GIANT MIXTURE

One of our leaders and represents the choicest strain of this popular and profitable flower. Combining the finest selections of several Pansy specialists, the perfect blending is further insured by the addition of separate colors that do not generally appear in the average mixture. Trade pkt., 75c; $\frac{1}{8}$ oz., \$1.80; $\frac{1}{4}$ oz., \$3.00; oz., \$10.00; $\frac{1}{4}$ lb., \$36.00.

VAUGHAN'S IMPROVED SWISS GIANT MIXTURE

The flowers of this strain are of enormous size, 3 inches and over in diameter. They are perfectly round with overlapping petals, borne on strong stalks well above the remarkably luxuriant foliage. Thick petals, of a rich velvety texture, give this strain of pansy the required substance so necessary to a perfect pansy.

The superb colors and color combinations—are their distinctive feature. Excellent for greenhouse culture. Trade pkt., 60c; $\frac{1}{8}$ oz., \$1.30; $\frac{1}{4}$ oz., \$2.25; oz., \$8.00; 4 oz., \$30.00.

VAUGHAN'S DWARF SUPER SWISS MIXED

This type, being shorter and more compact, is more suitable to plant sales. The color range is as good as that of the Improved Swiss. Trade pkt., 60c; $\frac{1}{8}$ oz., \$1.40; $\frac{1}{4}$ oz., \$2.40; oz., \$8.00.

Petunias—Complete List for Bedding and Pots

PETUNIA Dwarf California Giants Improved (Vaughan's Blend)

DWARF CALIFORNIA GIANTS IMPROVED

(Vaughan Blend)

In this remarkable strain, flowers of the largest size are borne on plants of dwarf habit, a combination which is ideal for pot culture and bedding. Flowering begins early, when the plants are very small, so that salable plants are quickly produced. Plants sell on sight. They are bushy, grow about 12 in. high and produce their immense open faced, deeply ruffled flowers freely. Some are self colors veined in a contrasting shade, some combine two or more colors in the same flower in a wonderful color harmony. The warm rich colors predominate.

ANEMONE St. Brigid's Hybrids

ALYSSUM Saxatile Compactum

We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of mid-summer, and the long growing season produces larger plants that winter over more successfully.

AQUILEGIA Mrs. Scott Elliott's Strain

Seeds of Biennials and Hardy Perennials

Perennials fill a large and interesting place in the operations of an up-to-date florist establishment. Some are as easily raised as annuals; quite a few may be forced; others make fine pot plants; and many furnish splendid cutting material. The rock garden requirements absorb all the low-growing varieties and the florist with his eye to the future will devote considerable space to perennials of all kinds. They require little heat, if any, and not much care.

SEED GERMINATES SLOWLY AND IRREGULARLY

of the following varieties and a seed bed should be prepared where it will be undisturbed for a year or more.

Aconitum, Anemone, Delphinium Cardinale, Dictamnus, Dielytra, Iris, Phlox Decussata and Divaricata, Primulas, Trollius and nearly all Alpines.

Rock Garden subjects are marked X.

Then put them in fresh water and your Poppies will last from three days to a week in the house, or you can put them in full sun and they will stand up two or three days, or until the petals drop, without wilting.

BEGONIAS

Tuberous-Rooted

Every florist should grow some of these bulbs, as they make showy plants that find ready sales in the spring and summer. Use 4-inch pots and shift later to 5 and 6-inch pots if larger plants are wanted. A compost of one part rotted cow manure to two parts loam and one part leaf mold will give good results. Water sparingly until growth is started. They like a 55-58 degree temperature at night.

ROSA VAN LIMA

While the crop of Gladiolus is larger than last year the Fusarium yellows and bulb rot disease is still cutting in heavy in some growers stocks. The demand for the larger size bulbs is already heavy, therefore we suggest that when you get this catalogue you will get your orders placed at once so we can set aside your order for delivery whenever you want from January to May 15th.

Please allow us to send good substitutes in case we are out of the variety you order.

FANCY-LEAVED CALADIUM

CALADIUMS are easily grown but should not be put in a Carnation temperature. Start the bulbs in flats, turning them upside down, since this is a crown-rooting bulb and the roots come out around the top (center) eye. This direct contact with the growing medium produces roots more quickly than the opposite method. Use a mixture of one part leaf-mold, one part good garden loam, and one part peat moss or other coarse neutral material, throwing in a small amount of coarse charcoal or other rubble for drainage. Press the bulb halfway into the soil and place the flats under a bench. The flats can be placed on top of the flows, but if this is done, they should be shaded. The temperature should be 80 to 85 degrees or higher, as the higher the temperature, the better starting results you will have. Be careful that the flats do not dry out if placed either on the flows or returns. Water sparingly until the bulbs begin to sprout and have roots 4 to 6 inches long. When the sprouts begin to show, place the bulbs in 5 or 6-inch pots, using a good rich leaf-mold. Water copiously when in full growth and use weak liquid manure once weekly if possible.

Vegetable Plants With a Pedigree

Vaughan's Seeds of Table Quality Varieties are Sure Selling

THANKS to millions of new homes, plus the influence of the high cost of living, home vegetable gardening is increasing. A booming market for vegetable plants seems to be assured next spring.

To obtain premium prices for your plants, varieties should be grown which are especially suited for home gardens. Having specialized for half a century in these table quality varieties, Vaughan's can supply them; and by growing plants from Vaughan's Seeds and advertising the fact, you will attract customers at higher prices.

On these two pages we list varieties which our experience has shown to be in especial demand among home gardeners.

BROCCOLI

De Cicco. 60 days. The best strain for Market, Home Garden or freezing, suitable in north or south. 18 inches tall; branching, forming compact head of bluish green flower buds. After the main head is removed smaller heads are produced from the branches which continue to the end of the season. Pkt., 15c; oz., 60c; $\frac{1}{4}$ lb., \$2.00; lb., \$6.00.

CABBAGE YELLOW-RESISTANT

We offer the best resistant strains of cabbage seed through the cooperation of some of the best cabbage experts in the district of Racine, Wisconsin. Wherever the yellows disease has been known, we advise the use of resistant varieties. As a second precaution, everyone should give the hot water treatment to cabbage seed to insure freedom from black rot. Just before planting soak the seed for 30 minutes in water heated to 122° F.

Bugner. 100 days. This is the most popular of all the green types of cabbage for Market, Home Garden, Kraut and storage. It is one of the heaviest for size of head, being firm, tender and excellent quality, 8 inches round, flattened slightly, deep through, 7 inches, weighing 10 pounds or more, outer leaves deep purplish green with a tight folded leaf covering the head. Pkt., 15c; oz., 70c; $\frac{1}{4}$ lb., \$2.00; lb., \$6.00.

Globe. 75 days. A solid round headed resistant. Glory of Enkhouer Cabbage. Stem medium short particularly valuable for kraut. Pkt., 15c; oz., 45c; $\frac{1}{4}$ lb., \$1.45; lb., \$4.25.

Jersey Queen. 60 days. Very similar to Early resistance to yellows. Pkt., 15c; oz., 45c; $\frac{1}{4}$ lb., \$1.45; lb., \$4.25.

Red Yellows Resistant. 100 days. While this is not quite as large as the Long Island Mammoth Rock Red strain, it is darker and more uniform; being yellows resistant, is safer to grow. All sections of the country are becoming infested with yellows so it is important that resistant strains be more extensively used. Pkt., 15c; oz., 65c; $\frac{1}{4}$ lb., \$1.65; lb., \$5.00.

Marion Market. 75 days. The third yellows-resistant cabbage to mature. Of an excellent Copenhagen Market type, though later than select Copenhagen, coming a short time before Glory of Enkhouer. Pkt., 15c; oz., 45c; $\frac{1}{4}$ lb., \$1.45; lb., \$4.25.

Racine Market. 64 days. The finest resistant though not quite the size of Resistant Detroit, resist bursting more. The leaves are colored a beautiful bluish green. Pkt., 15c; oz., 70c; $\frac{1}{4}$ lb., \$2.00; lb., \$6.00.

D. D. T.—Yamtox

Use of DDT alone seems to have a tendency to increase the infestation of other insects that it does not control. This may be due to killing off desirable parasites, or freeing them from competition. DDT Yamtox contains the full complement of rotenone necessary for the control of red spiders and other mites, thrips and aphids. The incorporation of 5% DDT in it widens its range of use to the satisfactory control of tarnished plant bug and leaf rollers. Where the plants are easily damaged, or where it is desired to spray open flowers of mums, or to dip the entire plant, as in the case of cyclamen mite, Yamtox DDT sure fills the bill. Price per gallon, \$12.00; case of 6—1 gallon cans; \$11.00 per gallon.

YAMTOX WITH B H C

Adding highly purified Benzene Hexachloride with rotenone in our Yamtox produces a spray material safe to use on most plants. This new combination will cover a wider range of insects than a rotenone spray and gives a fumigation effect from the gamma isomer of the BHC it contains. Control of Aphids and Thrips is more readily obtained with BHC than any other material available. Price \$18.00 per gallon. In ordering specify Yamtox with BHC or Yamtox with DDT.

Freshly Packed and Tested Lawn Seed in 1951 for Your Unsold 1950 Stock

Federal Seed Law Requires Dated Germination Tests

OUR dealers can purchase cartons and 5-lb. bags of our branded seed with no fear of carrying over outdated seed into the following year. We will allow unsold packages to be returned to us and replace them with freshly packed and tested seed the following spring. Dealers who have tried this plan report that it enables them to keep up stocks and get maximum sales throughout the season with no fear of inventory losses.

This offer is NOT in any way to be considered on a consignment basis but is solely for the protection of our dealers against having to carry into the following year unsalable, outdated and soiled cartons.

The terms of payment are absolutely the same as heretofore.

This offer does not apply in any way whatsoever to bulk seed or non-branded seed and this is in no way to be considered a guarantee sale. All seed to be exchanged must positively be returned to us prepaid by December 1, 1950, and replacement will be made by March 1, 1951.

NOTE—We cannot accept broken cartons and wet or otherwise damaged seed for exchange.

For Your Protection

All our grass seeds are carefully analyzed in our own fully equipped laboratory and tagged or labelled to conform to the complicated requirements of the state laws. Errors in labelling might be costly and troublesome. Play safe.
